LOW DENSITY S E EPOXY FILLER

DESCRIPTION AND USES:

This material represents a break thru in low density, self extinguishing epoxies. It's physical properties are exceptionally good for this type of compound. The cured material shows excellent adhesion to clean metal and wood, very low water absorption and good chemical resistance particularly to aircraft fluids. Furthermore, it can be nailed, threaded, countersunk, cut, drilled, etc. without cracking or chipping.

GENERAL PROPERTIES:

Type	epoxy
Color	light tan
Solids	100%
Stability	1 year in separate, closed containers (60-85°F)

CURED PROPERTIES:

Density	28-32 #/cu ft. (depending on degree of tamping)
Compression	1,800 psi minimum
Modulus (flexure)	2×10^{-5}
Water absorption (24 hrs)	.4%
Flammability	self extinguish 0-3 sec.

Directions for use:

1. Combine A and B components at 100 to 35 parts by weight. Mix well till uniform in color.
2. Cure to handle in 6 hours with pot life of 60** minutes. Full cure 72 hours.
3. Post cure for full physicals-2 weeks 80°F, 50%RH
* 3 days at 80°F, 50%RH plus 2 hours 200°F

** 1/2 Pint quantity. When mixing larger volumes considerable exotherm will result with corresponding reduction in pot life.

CAUTION: Epoxy compound may cause dermatitis in allergy prone individuals. Handle compounds in a well ventilated area. Wear protective cream and gloves on hands. Wash hands with soap and water after each use.
